ROBotics technology for Inspection of Ships

European Commission

Practical implementation of robotic technologies for the inspection of ships

Enrico Carrara & Cesare Mario Rizzo

PS PART OF genoa shipping week
PORT & SHIPPING TECH MAIN CONFERENCE

RIAR R Lloyd's Register FAYARD 3C CASCADE UIB Universitat de les Illes Balears

ROBINS
ROBotics technology for Inspection of Ships

European Commission

What is ROBINS?

- EU co-funded collaborative R&D project (Horizon 2020)
- Partners from Shipping, Robotics and IT/CAD-CAE industry
- Aims at using robots and visual software tools for inspection of ships

...Do we really need it?

RIAR R Lloyd's Register FAYARD 3C CASCADE UIB Universitat de les Illes Balears

ROBINS
ROBotics technology for Inspection of Ships

European Commission

Specific challenges:

- **Overall examination:** providing means for the selection of representative spaces
- **Close-up survey:** closely examine structural details and to identify any damage in association with wastage over the allowable limits
- **Equivalence:** provide a level of detail of structural components at least equivalent to the level that could be obtained by direct sensory experience of the Surveyor
- **Critical factors:** time of operation, completeness, accuracy of data

Improved safety

- Working at height
- Inaccessible spaces
- Health threats
- Emergency situations

Economic benefit for:

- Robot and ICT industry
- Asset owners and operators
- Service suppliers
- Class societies

We think so!!!

RIAR R Lloyd's Register FAYARD 3C CASCADE UIB Universitat de les Illes Balears

European Commission

What kind of robots?

Aerial Drones
mainly for visual inspection

Crawlers
for TM and other close-up inspections

RIAR R Lloyd's Register FAYARD 3C CASCADE UIB Universitat de les Illes Balears

ROBINS
ROBotics technology for INspection of Ships

What can robots do?

- When**
 - ✓ Any time
 - ✓ Class surveys
 - ✓ Statutory surveys
 - ✓ Owner / Vetting
 - ✓ Repair assessment
 - ✓
- Where**
 - ✓ Plate surfaces
 - ✓ Stiffening members
 - ✓ Structural details
 - ✓ Welds
 - ✓ Partially or fully confined spaces
- What**
 - ✓ Overall inspections
 - ✓ Spot visual inspection
 - ✓ Gaugings and NDT
 - ✓ Harsh, dirty, narrow and bumpy environment
- Why**
 - ✓ Reduced survey duration
 - ✓ Simplified preparation
 - ✓ Enhanced safety
 - ✓ Asset condition monitoring and tracking

ROBINS
ROBotics technology for INspection of Ships

Specific Challenges: Detection of ongoing wastage

- Material wastage**
 - General corrosion
 - Grooving
 - Pitting
 - Erosion
- Fractures**
- Deformation**
 - Linear
 - Planar

ROBINS
ROBotics technology for INspection of Ships

Specific Challenges: Thickness measurement (TM)

- Thickness measurements** are to be carried out at least in a set of areas as described in the Rules

Procedure:

- Go to point
- Clean (hammering, grinding)
- Put couplant
- Multiple readings
- Averaging / filtering
- Recording (with position)

ROBINS
ROBotics technology for INspection of Ships

Framework of (IACS) Rules

- Rec. No. 42**
 - Used to facilitate the required external and internal examinations,
 - Including close-up surveys and gauging.
 - Results normally obtained for/by the Surveyor.
 - The results [...] are to be acceptable to the attending Surveyor.
 - Inspections should be carried out in the presence of the Surveyor.
- UR Z7 rev.26**
 - (1.2.3) Remote Inspection Techniques as an alternative to Close-up Survey,
 - (1.2.15) [...] without the need for direct physical access of the surveyor / Inspector
- UR Z17 rev.13**
 - Service suppliers for remote Inspection techniques

ROBINS
ROBotics technology for INspection of Ships

Improving robotic technology

The *actual needs and expectations of potential end users* are to be met and *improvements need to be done*:

- **Piloting vs. operating**
- **Advanced tooling**
- **Mobility (reaching points of interest)**
- **Advanced software tools**

Logos: RINA, Lloyd's Register, FLYABILITY, SAFE DRONES FOR UNACCESSIBLE PLACES, GE, CASCADE, UIB, Universitat de les Illes Balears, FAYARD, CLASYS

ROBINS
ROBotics technology for INspection of Ships

Piloting vs. Operating

- **Skills required today (piloting):**
 - **Operating beyond visual line of sight**
 - **Live video feedback only**
 - **Understanding position and orientation**

- **Improving the ease of use (operating):**
 - **Ego-motion estimation**
 - **Progress in battery technology**
 - **(in)Sensitivity to environmental disturbance**

Logos: RINA, Lloyd's Register, FLYABILITY, SAFE DRONES FOR UNACCESSIBLE PLACES, GE, CASCADE, UIB, Universitat de les Illes Balears, FAYARD, CLASYS

ROBINS
ROBotics technology for INspection of Ships

Advanced Tooling

- **Preparation of the surface for TM**
 - Removing rust scales
 - Hammering
 - Grinding etc.

- **Improvements**
 - **Modular and possibly standards-based design**
 - **Available payload**
 - **Progress in battery technology**

Logos: RINA, Lloyd's Register, FLYABILITY, SAFE DRONES FOR UNACCESSIBLE PLACES, GE, CASCADE, UIB, Universitat de les Illes Balears, FAYARD, CLASYS

ROBINS
ROBotics technology for INspection of Ships

Mobility (reaching points of interest)

- **Mission:**
 - **Reach specific structural components**
 - **Observe details from any desired point of view**
 - **Make measurements on such components**
- **Dedicated crawlers nowadays are able to overcome 90° corners, climb vertical walls, walk upside-down, and other remarkable abilities.**
- **Nevertheless, many types of obstacles cannot be overcome yet.**

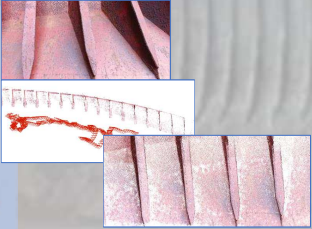

- **Significant advances are needed** in order to carry on thickness measurements in all desired places and in reasonable time.

ROBINS
ROBotics technology for INspection of Ships

Dedicated Software Tools

- **End user application**
 - Customized application for users of the marine industry
- **3D model reconstruction**
 - State-of-the-art reconstruction tools (photogrammetry, SLAM)
- **Virtual tours**
 - Annotated virtual model of a cargo space
- **Advanced image processing for defect detection**
 - Machine learning approach with convolutional neural networks (CNN)
- **Efficient scan of large spaces**
 - Process very big point clouds

What is the Testing Facility?

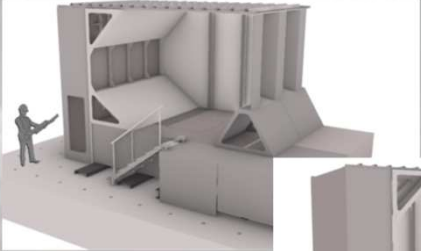

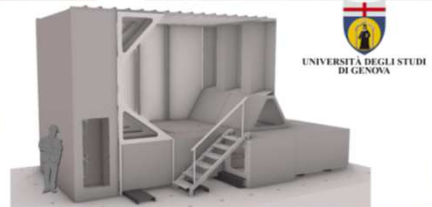

- A test bed expected to provide an easy and economical way for assessing and developing robotic platforms
- The location where shipping, robotics and IT/CAD-CAE stakeholders meet to discuss, design, develop and test new marine inspection technologies and set rule requirements
- Training/competence center about in-service management of ship and offshore, welded structures

Logos: RINA, Lloyd's Register, FIABILITIES, SAFE DRONES FOR ACCESSIBLE PLACES, GE, CASCADE, UIB, Universitat de les Illes Balears, FAYARD, GLAVYS

ROBINS
ROBotics technology for Inspection of Ships

Testing protocols to assess specific capabilities of RAS (section B)

The RAS is required to perform one of its typical actions in different working conditions. E.g. a drone should take a picture of a target while flying inside a harsh space or a crawler should take a thickness measurement while climbing on an inclined surface. Examples are:

- ✓ Stay in place test (SIP test) in the flight robustness part of the TF
- ✓ Surface transition (ST test) in the adhesion test module of the TF
- ✓ Obstacle crossing (OC test) in way of the adhesion test module of the TF
- ✓ Vibrating structure test (VS test), not yet available

RIAR R Lloyd's Register FAYARD DE CASCADE UIB Universitat de les Illes Balears CLAYTON

ROBINS
ROBotics technology for Inspection of Ships

Testing protocols and trials arrangements

→ Target: at least human surveyor performances

- ✓ Definition of testing protocols according to current rule requirements
- ✓ Typical trials working group: +1 test leader + 1 class surveyor + 1 superintendent, as usual in practice
 - a. Trials instructions delivered, then group leader tasked to supervise trials taking own notes as well as comments from end-users, i.e. class surveyors or shipowner superintendents
 - b. In tests where end-users somehow instruct RAS pilot, this will be regarded as an assessment of the team working, i.e. it is part of the trials as well (human factor)
