

The Addocs Documents collection gathers the contributions of the Doctorate of Research in Architecture and Design of the University of Genoa.

ADD is the acronym for the PhD Program and virtual Research Laboratory of the dAD-UNIGE, a catalyst of scientific experiences and prospective, experiences associated to the disciplines of the space and products, as well as their relationship with current procedural transformations. Under the fields of Architecture and Design its structure meets three curricula –Architecture, Design, Naval/Nautical Design– with the aim of addressing, in an interdisciplinary and multi-scalar dimension, the new phenomena of change – social, cultural, environmental, spatial and material – that influence today’s project and productive activity understood as a process, its cognitive and operational tools (and systems) and their relationship with the society of Information and Knowledge.
