Abstract	VII
1. Pollutants propagation: mathematical modeling	1
1.1. Propagation mechanisms of pollutants in groundwater	2
1.1.1. Advection	2
1.1.2. Molecular diffusion	2
1.1.3. Kinematic dispersion	3
1.1.4. Hydrodynamic dispersion	5
1.1.4.1. <i>Peclet number</i>	6
1.1.5. Reaction models	7
1.1.6. Biodegradation	9
1.1.7. Adsorption/Desorption	10
1.2. Differential equation fundamentals for mass transport	13
1.2.1. Mass balance for the contaminant	13
1.2.2. Conservative and non-conservative solutes	14
1.3. Theoretical models for one-dimensional problems	17
1.3.1. Conservative solutes	17
1.3.1.1. <i>Continuous inlet distribution</i>	17
1.3.1.2. <i>Impulsive inlet distribution</i>	18
1.3.2. Non-conservative solutes	18
1.3.2.1. <i>Solutes subject to chemical degradation</i>	19
1.3.2.2. <i>Solutes subject to adsorption</i>	19

1.3.2.3. <i>Solutes subject to chemical degradation and adsorption</i>	20
1.4. Comparison of the one-dimensional models	29
1.4.1. Limit conditions of the Williams & Tomasko one-dimensional solution	29
1.4.2. Validity of the Williams & Tomasko one dimensional solution	32
1.5. Theoretical models for three-dimensional problems	34
1.5.1. Conservative solutes	34
1.5.1.1. <i>Instantaneous inlet distribution, point source</i>	34
1.5.1.2. <i>Continuous inlet distribution, areal source</i>	35
1.5.2. Non conservative solutes	36
1.5.2.1. <i>Instantaneous point source</i>	37
1.5.2.2. <i>Continuous volumetric source</i>	39
1.5.2.3. <i>Plane source</i>	40
1.5.2.4. <i>Continuous volumetric source with exponential source decay</i>	43
1.5.2.5. <i>Continuous plane source with exponential source decay</i>	44
1.6. Comparison between plane source and volumetric source: numerical simulations	45
Bibliography	48
List of Tables	50
List of Figures	50

2. Analytical solutions of one-dimensional contaminant transport with source production-decay in a semi-finite domain	51
2.1. Governing equations	54
2.2. Analytical solutions for one-dimensional problems	55
2.2.1. Constant inlet distribution subject to first-type boundary conditions and semi-finite domain	56
2.2.2. Constant inlet distribution subject to third-type boundary conditions and semi-finite domain	56
2.2.3. Exponential inlet distribution subject to first-type boundary conditions and semi-finite domain	57
2.2.4. Exponential inlet distribution subject to third-type boundary conditions and semi-finite domain	58
2.3. The proposed analytical solution with simultaneous source production and decay	58
2.3.1. General inlet distribution subject to third-type boundary conditions and semi-finite domain	59
2.3.2. Models comparison	63
2.4. Some possible solutions	65
2.4.1. Linear combination of exponential inlet distribution subject to third-type boundary conditions and semi-finite domain	65
2.4.1.1. <i>Limit cases</i>	67
2.4.2. Linear combination of exponential inlet distribution subject to first-type boundary conditions and semi-finite domain	69
2.4.2.1. <i>Limit cases</i>	72

2.4.3.	Consecutive reactions at the source subject to third-type boundary conditions in semi-finite domain	74
2.4.4.	Consecutive reactions at the source subject to first-type boundary conditions in semi-finite domain	76
2.4.5.	Finite release at the source subject to third-type boundary conditions in semi-finite domain	77
2.5.	Some simulations and discussion	78
2.5.1.	Linear combination of exponential inlet distribution subject to third-type boundary conditions and semi-finite domain	80
2.5.1.1.	<i>Limit cases</i>	83
2.5.2.	Linear combination of exponential inlet distribution subject to first-type boundary conditions and semi-finite domain	88
2.5.2.1.	<i>Limit cases</i>	91
2.5.3.	Finite release at the source subject to third-type boundary conditions in semi-finite domain	94
2.6.	Example of application	96
	Appendix A	100

	List of Figures	108
3.	Analytical solutions and approximation errors of new 3D contaminant transport models	110
3.1.	Theoretical models	114

3.2. Three-dimensional solution for a plane source with exponential decay	
121	
3.3. Approximation Errors	123
3.3.1. Concentration fields	127
3.3.2. Relative errors	131
3.3.2.1. <i>Time dependence</i>	135
3.3.3. Centerline profiles	138
3.3.4. Transverse profiles	140
3.4. Three-dimensional solutions for a plane source with exponential decay and production at the source	143
3.5. Approximation Errors for 3D solutions for a plane source with exponential decay and production at the source	147
3.5.1. Concentration fields	149
3.5.2. Relative errors	154
3.5.2.1. <i>Time dependence</i>	156
3.5.3. Centerline profiles	160
3.5.4. Transverse profiles	163
